CB-26P Fitting position

Alfa V6 24v

Paul Martin fitted the device to his Alfa V6 and here are his comments:

"The Ecotek seems to be doing its job the car is more responsive in the lower rev range, I just came home from Wales, were I did some driving around Snowdonia and Blaneu Festiniogue, I did less gear changes than I expected and the car pulled easily in 6th gear on hills were I would have expected to change down to 5th or possibly 4th.

As for consumption figures I will give these at a later date as I have just done a lot of fast dual carriageway and fast Welsh back roads, this is not my usual driving haunt so it's not a true representation of my usual driving style, saying that I did 225 miles to half a tank so its looking good...."
