CB-26P Fitting position

Chevrolet Corvette (C3) 1978

This 1978 Chevrolet Corvette belongs to Barclay who works for Ecotek and is a Classic Corvette Club member; he says fitting a pair of CB-26P's (the 'Vette is 5.75 Litres - 350 cubic inches in the US) has transformed the cars performance, with improvements in responsiveness and acceleration as well as more than 20% fuel savings and improved emissions. "Best thing I ever did for the car" and an independent review by the American Car World section of Street Machine Magazine confirmed it. Among other things they said: "The Ecotek device improved the car's round-town running noticeably".

If you are keen on Corvettes there's no better place to go than the Classic Corvette Club UK Web site: www.corvetteclub.org.uk - there's just about everything you'll ever need to know available through the site and if you own a Corvette and aren't a member then you can, and should, join immediately!
