CB-26P Fitting position

Focus 1.6 Zetec –S

Martin contacted us with fitting pictures and a sort term review of the device on his Ford Focus 1.6 16V Zetec-S. Here are his initial impressions:

"Rough idle gone, when idling car is smoother and when put under high electrical load - fan etc.. Revs also recover quicker.

Response is up, engine runs a lot smoother and seems to give more power.

Fuel saving - at this stage I estimate about 10 miles improvement which is not much, bit disappointed here as it was looking better initially.

Usually to half way mark when 90% is motorway or above 50mph I get 200 miles got about 215 today , will see over the longer term but at least there is a noticeable difference."
