CB-26P Fitting position

Honda CRX

"Fitting the Ecotek valve to 2 gen Honda CRX (1.6i-16V DOHC) was pretty much a straight forward job. There were no complications whatsoever - just cut the brake servo hose near the intake manifold and install the valve and fine tune it like instructed.

My CRX is slightly modified (4-2-1 header and sportexhaust system, K&N cone filter with CAI, lightweight pulley) so the responsiveness was great already.

After the installation of Ecotek the engine runs much smoother than it use to and it seems to react even better than before. You can definitely feel the difference that the Ecotek will make to your Honda."
