CB-26P Fitting position

MG ZR160

Adrian emailed us in Jan 2005 after fitting a CB unit to his MG ZR160 - here is what he said:

"I initially fitted the valve on my MG ZR160 with the intake facing up. This was very noisy, so I tried it with the intake facing down (see attached pic).

This drastically reduced the noise level. In fact in this position it was quieter without the air filter.

The fit took just a couple of minutes, and the performance difference was immediately noticeable.

I don't have any data on fuel consumption yet, but to be honest I don't care! The increased performance and smoothness right through the rev range alone is worth every penny!" - Adrian Brewster
