CB-26P Fitting position

Mercedes 190

Early Mercs are a dream to fit. This Merc 190E belonged to Mike Ford of Crystal Motors who stock and fit the device and he reckons he gets more than 10% in fuel savings - but he would, wouldn't he!

At a recent MoT Mikes emissions from the 140,000 mile motor read as follows:

CO (max for MoT 3.5% volume) was 0.30% against the manufacturers spec of 1.5%.  
Hydrocarbons (max for MoT 1200 ppm) were 90 ppm against manufacturers 300 ppm.  
Interestingly high compared with modern motors but still a significant reduction!

Older Mercs benefit considerably from the CB-26P not only because of the potential fuel savings but because the cars last so long many pre-catalytic converter cars are still in daily use; earlier S Class cars are transformed by a pair of CB-26's - we hear rumours that a Mercedes technician is testing one on his new E Class but we haven't had a phone call yet!
