CB-26P Fitting position

Mercedes A Class A160 and A190

The new Mercedes A Class is a popular and economical 'MPV mini' from Mercedes but guess what? Sergio from SVC in Brazil has been testing the CB-26P on their A160 and their A190 and here is what he found (after telling our US distributor that he would eat his hat if it made any difference):

"I just finished to eat my hat and probably will take an umbrella for dessert... Absolutely amazing the Ecotek results in the Mercedes A Class. I'm surprised with the increase in the performance at low revolutions, the throttle behaviour is quite fantastic.

The Ecotek CB-26P result astonished our staff, including the Mercedes-Benz Maintenance Manager of the Brazilian factory in the city of Juiz de Fora. Fuel economy between 9-12% and sensible increasing in torque.

I'm so impressed with the CB-26P results that I made a page which now includes the emission figures to help the Mercedes A Class owners to install it. Please look at <http://svcgloba.com/smf/>

Of course, you can forward my comments. Absolutely no problems. And again, congratulations with this wonderful automotive development."

Best regards,
Sergio
