CB-26P Fitting position

Nissan 200SX and Sentra

The Nissan 200sx is a Turbo, and the Ecotek device switches off when the engine is running on boost, but it makes the car a great deal more tractable at lower revs and sharpens throttle response - so off boost driving is much improved.

Most notably it helps driveability when used in conjunction with the SE Stage 2 chip - particularly when cold and, especially with a high pressure fuel pump, it will help you through the MoT emissions test!

Sentra is the non Turbo version available overseas. Significant improvements in throttle response, smoothness and MPG are reported.
