CB-26P Fitting position

Nissan Maxima V6

Dave Butler reviewed the Ecotek for the www.bignissans.org.uk site having fitted it to his Nissan Maxima V6 3000 - click on the 'A32-QX' section and then look under 'Articles' - Mechanical Advice 'Burning Lean and Mean!'

He says: "I've done three tanks of pure London traffic driving. Can you imagine how long that took? I got 30, 29 and 28 mpg. Previously it was doing 20mpg. Since this was town driving and generally below 40-50mph, overdrive was kept off to hopefully prolong the life of the tranny by 15 minutes or so (you do all know about putting it in neutral while waiting at lights as well, don't you?). Expect to see both bits of advice repeated by everyone often, until it becomes second nature. I prefer motorway and A-Road driving. Not being particularly fussy, I'm getting 38mpg. This used to be 30-33mpg at best."

Definitely a HIT! - from 20 mpg to 28 mpg! He's written a very comprehensive article with all the whys and wherefores - worth a visit to the site. Thanks Dave!
