CB-26P Fitting position

Peugeot 306 XS

CruiseSouth did a test on their Peugeot 306XS picture left and their conclusions were:

"Immediately a difference was noticeable. The car seemed to rev more evenly and pull without the usual flat spots and lumpiness that we had grown used to.

It also seemed to be making less effort to reach speeds, with the revs at high speed lower than they were prior to the fitting of the CB-26P. The performance definitely seemed to have been improved as Ecotek claimed it would be".
