CB-26P Fitting position

Rover Montego

A collectors example of good old British engineering. We have had a fine tradition of excellence in motor engineering in this country - people laugh at some of the cars we built but any problems with the British motor industry have all been down to bad management, lack of investment and politics. Just look at Formula 1 - the World Premier motorsport showcase – more than half the cars and engines are made or assembled in the UK - the Ferrari design team are virtually all Brits and even the Mercedes engines are assembled in the UK.

Here's a fine example of a well made, reliable and much under-rated car the Rover Montego, perhaps not the prettiest or best appointed car in the World but a solid workhorse still running good as new - actually better now with a CB-26P fitted!

Better response, smoother acceleration and 15% improvement in fuel economy. Five minutes to fit - QED!
